

PART 1

LISTENING COMPREHENSION

Listening Comprehension (1)

SCAN ME

Part A:

Directions

For each question in part A, you will hear a short sentence. Each sentence will be spoken just one time. The sentences you hear will not be written out for you. Therefore, you must listen carefully to understand what the speaker says.

After you hear a sentence, read the four choices in your test book, marked (A), (B), (C), and (D), and decide which one is closest in meaning to the sentence you heard. Then, on your answer sheet, find the number of the question and fill in the space so the letter inside the oval cannot be seen.

1. (A) Cars are dented whether or not it rains.
(B) A lot of money is spent on cars in rainy weather.
(C) Many traffic accidents occur in wet weather.
(D) It will rain whether you take your car or not.

PART 2

STRUCTURE & WRITTEN EXPRESSION

Structure and Written Expression (1)

Part A:

Directions

In part A you will find that each problem consists of an incomplete sentence. Four words or phrases (A), (B), (C), (D) are given below the sentence. You are to select the one word or phrase that best completes the sentence. Then blacken the oval to indicate your answer.

1. Had he ___ earlier, he might have avoided the accident.
(A) leave
(B) left
(C) have left
(D) lefted
2. Not only ___ the committee approve the plan, but they also volunteered to fund it.
(A) did
(B) the
(C) did the
(D) the did
3. The professor demanded that every student ___ the thesis by Friday.
(A) submits
(B) submit
(C) submitted
(D) will submit
4. She insisted on ___ the report herself, despite the team's objections.
(A) to revise
(B) revising
(C) revise
(D) having revised
5. Rarely ___ such a persuasive argument in his writings.
(A) one finds
(B) did one find
(C) does one find
(D) one found
6. Betty was concerned that her great social popularity _____ a discouraging effect on the man she wanted to marry
(A) Should be
(B) Had been
(C) Will be
(D) Might have

7. They were the Boy Scouts _____ to help elderly people cross the street
(A) Whose was the task
(B) To whom it was the task
(C) It was whose task
(D) Whose task was
8. Singapore has only 226 square miles of land, but it stands foremost among the nations of south east Asia in having _____
(A) An annual growth rate maintained of over 6%
(B) Maintained an annual economic growth rate of over 6%
(C) Maintained over 6% of annual economic growth rate
(D) 6% of annual growth rate of economics maintained
9. He appears to be _____
(A) With illness
(B) Of ill
(C) ill
(D) illy
10. All the lights are on; the Smiths _____ up.
(A) Must got
(B) Must be getting
(C) Must get
(D) Got up must
11. Overexposure to the sun causes _____ health problems.
(A) various
(B) among
(C) but
(D) of
12. Birds head south to warmer climates when _____.
(A) is cold weather
(B) does cold weather come
(C) cold weather comes
(D) comes cold weather
13. The city council is empowered not only to enact new laws, _____ select a new mayor between elections should the need arise.
(A) and to
(B) but also to
(C) and
(D) so that
14. Drying of meats and vegetables is no longer considered one of _____ of preserving food.
(A) the ways are useful
(B) the ways most useful
(C) the most useful ways
(D) most are useful way
15. A giant kind of grass, bamboo may reach a height of 120 feet and _____.
(A) a diameter of one foot
(B) its diameter is one foot

- (C) there is a diameter of one foot
(D) which is a diameter of one foot

Part B:

Directions:

Each sentence in part B has four words or phrases underlined. You are to identify the word or phrase (A), (B), (C), (D) which should be corrected or rewritten. Then blacken the appropriate oval to indicate your answer.

16. I would come with you to the theater tomorrow night if you had asked me before
A B C
Mr. Jones invited me.
D
17. Pioneers on the plains sometimes living in dugouts, sod rooms cut into hillsides.
A B C D
18. On February 20, 1962, "Friendship 7" orbiting the earth in a manned flight that
A B C
lasted just under five hours.
D
19. t is very hard to be wholly objective when you are judging the work of a friend,
A
but when you are in a position of importance, you must judge his work on their

22. Dorothea Dix worked extensively during the second half of the nineteenth
A B
century to improve conditions in mental health facilities and the prisons.
C D
23. Henry Burson he gave such a stirring performance that the audience stood up and
A B C D
clapped for five minutes.
24. I could of told you that if you didn't check the brake fluid on your car, you were
A B C
risking an accident.
D

25. Denver is call the “Mile High City” because it is at an altitude of 5,280 feet, or
A B C D
one mile, above sea level.
26. The politician’s comments on his opponents were extremely critical at what he
A B C
termed their bias and unfairness.
D
27. The man practices what he preaches because he doesn’t smoke, drink, or does
A B C
anything to excess.
D
28. Although she had always wanted to fly in an airplane, Jane was very frightened
A B
and tells the flight attendant she would never go flying again.
C D
29. The value of precious gems is determined by their hardness, color, and brilliant.
A B C D
30. Find in 1933, The New York Sun was the first successful penny newspaper.
A B C D
31. Patients suffering from encephalitis have an inflammatory of the brain.
A B C D
32. Although it can be closely nearly approached, absolute zero cannot be reached
A B C
experimentally.
D
33. Sinking before it got to the finish line, the regatta race could not be finished, much
A B C
to the regret of the boat’s owner.
D
34. Jim spent his vacation going to Mexico, flying to Hawaii, and then he visited
A B C D
Canada.
35. Unless you want to go with the other group, then you had better hurry because we
A B C
are leaving in five minutes.
D
36. Today tapping a suspect’s phone is not longer allowed unless the investigators
A B
have a court order to do so.
C D
37. The church group has been conducting seminars to help its followers to develop a
A B
more tranquility philosophy of life.
C D

38. It was him who did all the work on the invention, but somebody else got
 A B C
all the credit.
 D
39. Often when the weather is extremely hot, people have very thirsty but are not
 A B C
terribly hunger.
 D
40. Nutritionists recommend that foods from each of the four basic groups be eaten
 A B C
 on a regularly daily basis.
 D

Structure and Written Expression (2)

Part A:

Directions

In part A you will find that each problem consists of an incomplete sentence. Four words or phrases (A), (B), (C), (D) are given below the sentence. You are to select the one word or phrase that best completes the sentence. Then blacken the oval to indicate your answer.

1. By next month, they ___ the negotiations for over three years.
(A) will have been conducting
(B) will have conducted
(C) will be conducted
(D) will conduct
2. The film, ___ received critical acclaim worldwide, was surprisingly unsuccessful at the box office.
(A) which
(B) that
(C) who
(D) whom
3. _____ in 1937, the Golden Gate Bridge spans the channel at the entrance to San Francisco Bay.
(A) Completes
(B) Completed
(C) Completing
(D) To complete
4. A slipped disk is a condition _____ the intervertebral disk protrudes and presses on nerves.
(A) What
(B) Which is
(C) In which
(D) That
5. There's no point ___ about past mistakes; we should focus on solutions.
(A) to worry
(B) worrying
(C) worry
(D) worried
6. The book, once ___ by critics, is now largely ignored.
(A) praised
(B) praising
(C) to praise
(D) was praising

7. He is the only one of the graduates who ___ offered a research position.
(A) has been
(B) have been
(C) was
(D) were
8. To increase efficiency, the process ___ simplified by removing redundant steps.
(A) was
(B) is
(C) has been
(D) will have been
1. The Kilauea volcano _____ on the eastern slope of the larger Mauna Loa volcano.
(A) Is situated
(B) Has situated
(C) Situated
(D) To situate
2. Out of John Kenneth Galbraith's *The Affluent Society* _____ for an increase in public goods, potentially at the expense of private goods.
(A) Came the argument
(B) His argument
(C) Argued
(D) The economist is arguing
11. The scientist's theory, if proven, could revolutionise the field ___ which it pertains.
(A) to
(B) on
(C) with
(D) that
12. It is high time they ___ action to address the problem.
(A) take
(B) took
(C) will take
(D) had taken
13. Some scientists say it is essential that mankind _____ the amount of air pollution in big cities.
(A) reduce
(B) reduced
(C) be reduced
(D) will reduce
14. Having arrived at the football stadium barely in time, _____.
(A) the two teams were just starting as we sat down.
(B) we reached our seats just as the game started.
(C) the officials had already blown the whistle for the game to start.
(D) the gatekeeper took our tickets as we passed.

15. If I ___ you, I would take the earlier flight.
(A) were
(B) had been
(C) would be
(D) am

Part B:

Directions:

Each sentence in part B has four words or phrases underlined. You are to identify the word or phrase (A), (B), (C), (D) which should be corrected or rewritten. Then blacken the appropriate oval to indicate your answer.

16. From 1785 to 1790, the capital of the U.S. will be located in New York City.
A B C D
17. The water in the Great Salt Lake is at less four times saltier than seawater.
A B C D
18. When T.S. Eliot's the Wasteland appeared in 1922, critics were divided as to how
A B
good it was written.
C D
19. One of the fishermen was describing for anyone who cared to listen how a great
A B
huge wave struck his boat and nearly turned it over.
C D
20. The governor is expected to return back to his office from his short holiday trip
A B
by Sunday evening at the latest.
C D
21. The most popular breed of dog in the United States are cocker spaniel, poodle, and
A B C D
retriever.
22. A water molecule consists of two hydrogen atoms and had one oxygen atom.
A B C D
23. The novels of Kurt Vonnegut present a desperately comic aware of human nature.
A B C D
24. In spite of her physician handicaps, Helen Keller graduated from Radcliffe with
A B C D
honors.
25. There exists more than 2,600 different varieties of palm trees, with varying
A B C D
flowers, leaves, and fruits.
26. Almost American Indian cultures have been agricultural societies since 2000 B.C.
A B C D

27. At the awards banquet, the philanthropist was recognized for his generosity and careful in aiding the poor.
A B
C D
28. After learned to print, elementary school children learn cursive writing.
A B C D
29. Authors Samuel Eliot Marison won two Pulitzer Prizes, one in 1943 for a biography of Columbus and the other in 1960 for a biography of John Paul Jones.
A B
C D
30. The United States is the world's largest cheese producer, making more than two million tons of cheese annual.
A B
C D
31. Latex rubber is made from a milky substantial in plants and trees of sapodilla family.
A B C D
32. The state with the most large production of tobacco products is North Carolina.
A B C D
33. Alfalfa is a nutritious crop rich in proteins, minerals, and with vitamins.
A B C D
34. Once the scientist had figured out the precise path of the comet, he is finding that he was able to predict its next appearance.
A B
C D
35. The intent of the Historical Society is to restore old buildings and the increase of interest in the history of the area.
A B C
D
36. Diamonds are evaluated on the basis of their weigh, purity, and color.
A B C D
37. According the Kinetic theory, all matter consists of constantly moving particles.
A B C D
38. Florida has long been well-known for it's excellent citrus fruits and warm climate.
A B C D
39. Almost of the trees in this plantation have had to be cut down and burned as a result of the infestation.
A B C D
40. The police has not decided whether or not to charge the four young men with possession of illegal drugs.
A B C
D

Part A:

Directions

In part A you will find that each problem consists of an incomplete sentence. Four words or phrases (A), (B), (C), (D) are given below the sentence. You are to select the one word or phrase that best completes the sentence. Then blacken the oval to indicate your answer.

1. The instructions were so vague that few participants ___ the task correctly.
(A) could complete
(B) can complete
(C) will complete
(D) be able to complete
2. The proposal, ___ in the committee last week, was unanimously rejected.
(A) to have been discussed
(B) having been discussed
(C) discussed
(D) having discussed
3. He denied ___ any involvement in the scandal.
(A) have had
(B) having
(C) to have
(D) have
4. The policy requires that all invoices ___ within thirty days of receipt.
(A) pay
(B) are paid
(C) be paid
(D) will pay
5. He says he ___ the document last month, but no copy was found.
(A) mailed
(B) has mailed
(C) had mailed
(D) was mailing
6. He made her ___ the error immediately.
(A) admitting
(B) to admit
(C) admit
(D) admitted

7. The manager, together with his assistants, ___ responsible for the project's delay.
(A) are
(B) were
(C) is
(D) have been
8. The CEO requested that the merger ___ postponed until further notice.
(A) is
(B) be
(C) will be
(D) was
9. She would rather ___ home than stay out late.
(A) to go
(B) go
(C) going
(D) gone
10. She suggested ___ the experiment under controlled conditions to verify the results.
(A) repeating
(B) to repeat
(C) repeat
(D) having repeated
11. While formerly a member of the sports club, Mr. Teeters _____ tennis there regularly.
(A) is used to playing
(B) was used to play
(C) used to play
(D) used to playing
12. In 1774 delegates from all colonies _____ attended the First Continental Congress.
(A) Georgia
(B) the exception was Georgia
(C) except Georgia
(D) except that Georgia was
13. Valley Forge National Park commemorates the time that Washington _____ in Valley Forge with his troops.
(A) spend
(B) spent
(C) was spent
(D) has been spent
14. _____ peaches are classified as freestone or clingstone depends on how difficult it is to remove the pit.
(A) The
(B) About
(C) Whether
(D) Scientifically

15. Keynes argued that to avoid an economic depression the government _____ spending and lower interest.
- (A) Is
(B) Higher
(C) Increase
(D) Should increase

Part B:

Directions:

Each sentence in part B has four words or phrases underlined. You are to identify the word or phrase (A), (B), (C), (D) which should be corrected or rewritten. Then blacken the appropriate oval to indicate your answer.

16. The amount of copper sulfate used in the experiment depends from the intensity of the heat.
- A B C D
17. After the yolk is separated from the white, it must be boil immediately.
- A B C D
18. The theory of natural selection is used to explain which animals of a species will die prematurely and which will survival.
- A B C D
19. Almost one-half of those taking specialized courses last year were taking self-improvement course.
- A B C D
20. Soon after the United States' entrance into the war, the major hotels in Atlantic City was transformed into military barracks.
- A B C D
21. Major advertising companies have traditionally volunteered its time to public service account.
- A B C D
22. The state of New Mexico is not densely population, with an average of only four people per square kilometer.
- A B C D
23. Alike bases which cause litmus to turn blue, acids cause litmus to turn red.
- A B C D
24. The General Agreement on Tariffs and Trades (GATT) is an international agreement designing to increase trade among member nations.
- A B C D

25. In a corporation the approval of a majority of stockholders may be required
A B
before a major decision can be done.
C D
26. J. Edgar Hoover has served as director of the FBI from 1924 until his death in
A B C D
1972.
27. For photosynthesis to occur, a leaf requires carbon dioxide, water, and
A B C
light is also necessary.
D
28. The contractings of the heart cause the blood to circulate.
A B C D
29. The UUS *Bonhomme Richard* was commanded by John Paul Jones, that won
A B
a notable sea battle during the Revolution.
C D
30. The project require more time than has been put in so far because it is so difficult.
A B C D
31. I had spent months to build my fiberglass boat, and now that it was ready, I
A B
wanted all my friends to come and see it.
C D
32. The offshore drilling rig is manned by well-trained and experienced workers who
A B
got good salaries and fringe benefits.
C D
33. When she came back from Hollywood, she wanted to tell everybody about all the
A B C
stars and exciting people who she had seen.
D
34. The bill of Rights was added to the Constitution specifically to guarantee certain
A B
the individual rights.
C D
35. Unlike light from other sources, which travels in all direction, the light from a
A B C
laser is highly directional.
D
36. According to the 1978 Bakke decision by the Supreme Court, an university may
A
not use admissions quotas to obtain a racially balanced student body.
B C D

Directions:

In part A you will find that each problem consists of an incomplete sentence. Four words or phrases (A), (B), (C), (D) are given below the sentence. You are to select the one word or phrase that best completes the sentence. Then blacken the oval to indicate your answer.

1. Only after the conference ____ how important the issue was.
(A) they realized
(B) they had realized
(C) did they realize
(D) they were realizing
2. The committee suggested that the report ____ revised before submission.
(A) be
(B) is
(C) will be
(D) was
3. Not until the project was completed ____ the true cost.
(A) they discovered
(B) did they discover
(C) they had discovered
(D) discovered they
4. The more you practice, ____ you will become.
(A) the more skillful
(B) skillful
(C) more skillful
(D) the skillful
5. By the time we arrived, the performance ____.
(A) has already started
(B) had already started
(C) already starts
(D) is already starting
6. Neither the manager nor his assistants ____ willing to take responsibility.
(A) was
(B) were
(C) is
(D) be

7. The proposal, along with the supporting documents, ____ submitted yesterday.
(A) were
(B) was
(C) have been
(D) are
8. Rarely ____ such an impressive display of skill.
(A) I have seen
(B) have I seen
(C) I saw
(D) saw I
9. The company needs employees ____ are adaptable and creative.
(A) which
(B) who
(C) whom
(D) whose
10. We will start the meeting as soon as Mr. Johnson ____.
(A) will arrive
(B) arrives
(C) arrive
(D) arriving
11. The problem is believed ____ from a minor technical error.
(A) having resulted
(B) to result
(C) resulting
(D) to have resulted
12. Such advanced technology ____ only in large research facilities.
(A) finds
(B) is found
(C) is finding
(D) found
13. Not only ____ but she also managed to convince the others.
(A) she completed the task
(B) did she complete the task
(C) completed she the task
(D) she did complete the task
14. The teacher insisted that the homework ____ on time.
(A) is submitted
(B) be submitted
(C) was submitted
(D) will be submitted

15. Had it not been for your help, we ____ in trouble.
(A) would be
(B) would have been
(C) were
(D) had been

Part B:

Directions:

Each sentence in part B has four words or phrases underlined. You are to identify the word or phrase (A), (B), (C), (D) which should be corrected or rewritten. Then blacken the appropriate oval to indicate your answer.

16. The union vice-president and his wife enjoy a sumptuous banquet and then sat
A B
through about two hours of boring speeches.
C D
17. If anybody wants to talk to me about buying insurance, please tell them that
A B C
I will be back in about an hour.
D
18. The birthday cake was careful made, and the children ate it so fast that there was
A B
hardly enough to go around, let alone any to take home.
C D
19. A well-known doctor has said that it is not possible to understand people's health
A
problems without understanding the circumstances from which he comes.
B C D
20. Balloons have been used in various wars not only to direct artillery fire and
A
report troop movements however to carry bombs and protect against low-flying
B C D
plans.
21. Cartilage covers the ends of bones helps to protect the joints from wear and
A B C D
tear.
22. Much Civil War battles were fought in Virginia than in any other state.
A B C D
23. It is the role of the National Bureau of Standards to establish accurate
A B
measurements for science, industrial, and commerce.
C D

24. Eloise, while she thought she had all the materials she needed for her ceramics project, she found that she would have to get more clay from the storeroom.
A B C D
25. The veterinarian has examined several dogs, two of those are believed to be developing rabies.
A B C D
26. The credit for the work that led to the Nobel Prize belong not only to the winner but to those who assisted him.

PART 3

READING COMPREHENSION

Reading Comprehension (1)

Deep beneath the ocean's surface, hydrothermal vents support unique ecosystems that thrive without sunlight. These vents release mineral-rich, superheated water, creating an environment where chemosynthetic bacteria form the base of the food chain. Giant tube worms, clams, and shrimp live symbiotically with these bacteria, relying on them for nourishment. Scientists believe that studying these ecosystems could provide insights into the origins of life on Earth and the potential for life on other planets with similar extreme conditions. However, deep-sea mining threatens to disrupt these fragile habitats, sparking debates over the balance between economic gain and environmental preservation.

1. What is unusual about hydrothermal vent ecosystems?
 - (A) They rely on photosynthesis
 - (B) They survive without sunlight
 - (C) They have no living organisms
 - (D) They are found only in rivers
2. What forms the base of the food chain in these ecosystems?
 - (A) Fish
 - (B) Seaweed
 - (C) Chemosynthetic bacteria
 - (D) Coral
3. The relationship between tube worms and bacteria is described as:
 - (A) Competitive
 - (B) Predatory
 - (C) Symbiotic
 - (D) Parasitic
4. Studying hydrothermal vents could help scientists understand:
 - (A) The structure of volcanoes
 - (B) The formation of coral reefs
 - (C) The origins of life
 - (D) How to mine deep-sea minerals
5. What is the main environmental threat mentioned?
 - (A) Climate change
 - (B) Overfishing
 - (C) Oil spills
 - (D) Deep-sea mining

The next famous woman writer to be considered is Dorothy Parker, an American poet, short story writer, and literary critic who became famous in the early twentieth century for her witty but cynical observations on life. She got her first paying job as a writer in 1916 at the age of 23 when she began working for a women's magazine, and nine years later she became a contributor to *The New Yorker* as a book reviewer.

In addition to her magazine work, she published volumes of poetry and short stories with the recurrent themes of disappointment with life and the loss of idealism. One of her most famous observations, "Men seldom make passes/At girls who wear glasses," came from the poem "News Item," which was published in the volume *Enough Rope* (1926). This volume of poetry was followed by *Sunset Gin* (1928), *Death and Texas* (1931), and a collection of short stories *Here Lies* (1939).

6. According to the passage, Dorothy Parker was NOT famous for
 - (A) Poetry
 - (B) Humor
 - (C) Book reviews
 - (D) Autobiography
7. Dorothy Parker's first job was
 - (A) For a women's magazine
 - (B) As a literary critic
 - (C) For *The New Yorker*
 - (D) As a short story writer
8. In line 7, the word "recurrent" could best be replaced by which of the following?
 - (A) Related
 - (B) Repeated
 - (C) Flowing
 - (D) Negative
9. In what year did "New Item" appear?
 - (A) 1916
 - (B) 1926
 - (C) 1928
 - (D) 1931
10. With what topic does the paragraph preceding the passage most likely deal?
 - (A) Dorothy Parker's early childhood
 - (B) American literature of the nineteenth century
 - (C) An introduction to literary criticism
 - (D) A well-known female author other than Dorothy Parker

In the vast expanse of the Sahara Desert, life has found ways to adapt to the extreme conditions. Nomadic tribes traverse the shifting sands, following ancient routes that connect distant oases. These communities rely heavily on camels, known as the "ships of the desert," for transportation and sustenance. Despite the harsh climate, the desert holds secrets of ancient civilizations buried beneath its dunes—traces of once-thriving cities that vanished due to climate shifts and overuse of natural resources. In recent years, archaeologists have uncovered artifacts suggesting that parts of the Sahara were once lush grasslands, home to diverse wildlife. Climate change studies in the region reveal a complex history of transformation, reminding us that environments are never truly static.

11. What is the main subject of the passage?
 - (A) The dangers of desert travel
 - (B) Adaptation and history of life in the Sahara
 - (C) Modern tourism in the Sahara
 - (D) Wildlife conservation in Africa
12. Why are camels referred to as "ships of the desert"?
 - (A) They travel in groups
 - (B) They are used for fishing
 - (C) They are essential for desert travel
 - (D) They store food
13. What evidence have archaeologists recently found?
 - (A) Ancient maps
 - (B) Desert trading posts
 - (C) Artifacts showing Sahara was once fertile
 - (D) Fossilized camels
14. What caused some ancient cities in the Sahara to disappear?
 - (A) Foreign invasions
 - (B) Lack of trade routes
 - (C) Climate changes and resource depletion
 - (D) Earthquakes
15. The phrase "never truly static" implies that environments:
 - (A) Remain unchanged over time
 - (B) Constantly evolve
 - (C) Are always destroyed by humans
 - (D) Cannot be studied
16. The term "oases" refers to:
 - (A) Sandstorms
 - (B) Water-rich spots in the desert

- (C) Small desert towns
- (D) Mountain passes

17. Which group still travels along ancient routes in the Sahara?

- (A) Nomadic tribes
- (B) Tourists
- (C) Archaeologists
- (D) Farmers

18. What does the passage suggest about the Sahara's past climate?

- (A) It was always arid
- (B) It was once greener
- (C) It was once covered in ice
- (D) It never changed

19. The best synonym for "traverse" in the passage is:

- (A) Build
- (B) Cross
- (C) Avoid
- (D) Hide

20. Which of the following best describes the tone of the passage?

- (A) Humorous
- (B) Persuasive
- (C) Critical
- (D) Informative

The study of the astronomical practices, celestial lore, mythologies, religions and world-views of all ancient cultures is called archaeoastronomy. It is described, in essence, as the "anthropology of astronomy", to distinguish it from the "history of astronomy". Many of the great monuments and ceremonial constructions of early civilizations were astronomically aligned, and two well-known ancient archaeological sites seem to have had an astronomical purpose. The Orion mystery, as it is dubbed, purports that the geometry and brightness of the stars in the Orion constellation are mirrored in the alignment and size of the great pyramids of Egypt. While this claim remains hypothetical, it is nevertheless clear that ancient Egyptians incorporated astronomy with architecture. In the Temple of Abu Simbel, for example, sunlight penetrates a sacred chamber to illuminate a statue of Ramses on October 18, which ushered in the start of the Egyptian civil year. Astronomy did not exist on its own, however, but as one limb of a larger body whose other limbs included agriculture and the after-life. In this sense, astronomy linked the two themes humans are most obsessed with: life and death.

Around the same period, another monument was erected that combines religion, architecture and astronomy. Stonehenge was built in three separate stages, starting in approximately 3000 B.C. Mostly it remains a mystery, but two clues offer some

enlightenment. One is that the megalithic arrangement is not random nor purely aesthetic but astronomical: It marks the solstice and lunar phases. The other is that archaeological excavations have revealed it was also used in religious ceremonies. Chinese records suggest their own astronomical observations dated from the same period; Indian sacred books point to earlier observations; and Babylonian clay tablets show Chaldean priests had been observing the sky (including the motion of the visible planets and of eclipses) shortly thereafter. But the earliest physical vestige of an observatory in fact, lies in southern Egypt. Surprisingly it is probably not the product of a Semitic (Syrian or Babylonian) peoples but rather sub-Saharan, as evidenced by analysis of a human jawbone found on site. The Nabta site is the African equivalent of Stonehenge except it predates it by some 1,500 years.

21. What does the passage mainly discuss?
(A) the definition and some examples of archaeoastronomy
(B) the possible astronomical significance of ancient monuments
(C) the history of astronomy
(D) the oldest known site possibly used for astronomy
22. The underlined word “celestial” could best be replaced by
(A) ancient
(B) historical
(C) heavenly
(D) scientific
23. According to the passage, archaeoastronomy
(A) pre-dates astronomy
(B) is the anthropology of astronomy
(C) is also called the history of astronomy
(D) is not a true science
24. Which of the following, according to the passage, is true about the great pyramids of Egypt?
(A) they were built for purposes of astronomy
(B) they mark the solstice and lunar phases
(C) one of them contains a statue of Ramses in a sacred chamber
(D) they are part of the Orion mystery
25. The underlined word “ushered” is closest in meaning to
(A) brought
(B) identified
(C) marked
(D) signaled
26. The underlined word “illuminate” is closest in meaning to
(A) light up
(B) warm up
(C) touch
(D) explain

27. Where in the passage does the author make reference to the moon?
- (A) lines 5-9
 - (B) lines 10-14
 - (C) lines 15-19
 - (D) lines 20-24
28. The underlined word “enlightenment” is closest in meaning to
- (A) awareness
 - (B) hope
 - (C) evidence
 - (D) explanation
29. According to the passage, the earliest known site of an observatory is probably
- (A) Semitic
 - (B) Babylonian
 - (C) Chaldean
 - (D) Sub-Saharan
30. The underlined word “it” refers to which of the following?
- (A) Stonehenge
 - (B) the Nabta site
 - (C) African
 - (D) sub-Saharan

In the early 20th century, the development of quantum mechanics revolutionized physics, challenging classical ideas about the nature of reality. Classical mechanics, derived from Newton’s laws, assumed that objects had definite positions and velocities at all times, and that their behavior could be predicted with arbitrary precision if the initial conditions were known. However, experiments with subatomic particles began to reveal phenomena that defied these deterministic assumptions. The famous double-slit experiment, for instance, demonstrated that electrons could exhibit both particle-like and wave-like properties, depending on the experimental setup. This “wave-particle duality” suggested that the act of observation itself could influence the outcome, leading to the radical proposition that reality at the quantum level was inherently probabilistic rather than deterministic. One of the pioneers of this new understanding was Werner Heisenberg, who formulated the Uncertainty Principle. This principle asserts that it is impossible to know both the exact position and momentum of a particle simultaneously; the more precisely one is known, the less precise the other becomes. This was not a flaw in measurement, but a fundamental property of nature.

Another key figure, Niels Bohr, introduced the concept of “complementarity,” which holds that seemingly contradictory properties—such as wave and particle behavior—are both necessary to fully describe quantum systems, though they cannot be observed simultaneously. Together, these ideas formed the foundation of the Copenhagen interpretation of quantum mechanics, which dominated physics for decades. Yet, not all physicists accepted this view. Albert Einstein famously objected to the probabilistic nature

of quantum mechanics, remarking, “God does not play dice with the universe.” He, along with Boris Podolsky and Nathan Rosen, proposed a thought experiment—known as the EPR paradox—arguing that quantum mechanics must be incomplete, and that “hidden variables” might one day restore determinism. Later experiments involving quantum entanglement, however, provided strong evidence against hidden-variable theories, further cementing the probabilistic view of reality.

31. According to classical mechanics, what determined the behavior of objects?
 - (A) Random quantum events
 - (B) Observer’s influence
 - (C) Initial conditions
 - (D) Wave interference
32. The double-slit experiment demonstrated that:
 - (A) Electrons are always particles
 - (B) Observation can influence particle behavior
 - (C) Light cannot behave as a particle
 - (D) Quantum mechanics is deterministic
33. Which principle states that you cannot know both position and momentum precisely?
 - (A) Complementarity
 - (B) Relativity Principle
 - (C) Uncertainty Principle
 - (D) Wave Principle
34. What did Niels Bohr mean by “complementarity”?
 - (A) Different quantum states exist in parallel universes
 - (B) Wave and particle behaviors are both essential but mutually exclusive in observation
 - (C) Position and momentum cannot be measured at the same time
 - (D) Quantum mechanics is an incomplete theory
35. The Copenhagen interpretation views quantum mechanics as:
 - (A) Deterministic
 - (B) Probabilistic
 - (C) Based on hidden variables
 - (D) Classical
36. Why did Einstein disagree with the Copenhagen interpretation?
 - (A) He believed in wave-particle duality
 - (B) He rejected the uncertainty principle
 - (C) He opposed the probabilistic nature of quantum mechanics
 - (D) He thought electrons could not be observed

37. What was the purpose of the EPR paradox?
- (A) To prove that quantum mechanics was complete
 - (B) To suggest the existence of hidden variables
 - (C) To deny wave-particle duality
 - (D) To confirm the uncertainty principle
38. Later experiments with quantum entanglement:
- (A) Proved hidden-variable theories correct
 - (B) Showed that observation has no effect
 - (C) Supported the probabilistic view of quantum mechanics
 - (D) Disproved wave-particle duality
39. Which of the following is implied by the text?
- (A) Quantum mechanics invalidated all of Newton's laws
 - (B) Observation plays a fundamental role in quantum events
 - (C) Einstein eventually accepted the Copenhagen interpretation
 - (D) The uncertainty principle is due to faulty instruments
40. The tone of the passage is best described as:
- (A) Persuasive
 - (B) Neutral and informative
 - (C) Humorous
 - (D) Skeptical

The work of the railroad pioneers in America became the basis for a great surge of railroad building halfway through the nineteenth century that linked the nation together as never before. Railroads eventually became the nation's number one transportation system, and remained so until the construction of the interstate highway system halfway through the twentieth century. They were of crucial importance in stimulating economic expansion, but their influence reached beyond the economy and was pervasive in American society at large.

By 1804, English as well as American inventors had experimented with steam engines for moving land vehicles. In 1920, John Stevens ran a locomotive and cars around in a circular track on his New Jersey estate, which the public saw as an amusing toy. And in 1825, after opening a short length of track, the Stockton to Darlington Railroad in England became the first line to carry general traffic. American businesspeople, especially those in the Atlantic coastal region who looked for better communication with the West, quickly became interested in the English experiment. The first company in America to begin actual operations was the Baltimore and Ohio, which opened a thirteen- mile length of track in 1830. It used a team of horses to pull a train of passenger carriages and freight wagons along the track. Steam locomotive power didn't come into regular service until two years later.

However, for the first decade or more, there was not yet a true railroad system. Even the longest of the lines was relatively short in the 1830's, and most of them served simply to connect water routes to each other, not to link one railroad to another. Even when two lines did connect, the tracks often differed in width, so cars from one line couldn't fit onto tracks of the next line. Schedules were unreliable and wrecks were frequent. Significantly, however,

some important developments during the 1830's and 1840's included the introduction of heavier iron rails, more flexible and powerful locomotives, and passenger cars were redesigned to become more stable, comfortable, and larger. By the end of 1830 only 23 miles of track had been laid in the country. But by 1936, more than 1,000 miles of track had been laid in eleven States, and within the decade, almost 3,000 miles had been constructed. By that early age, the United States had already surpassed Great Britain in railroad construction, and particularly from the mid-1860's, the late nineteenth century belonged to the railroads.

41. The underlined word "stimulating" is closest in meaning to
 - (A) helping
 - (B) changing
 - (C) promoting
 - (D) influencing
42. The underlined word "their" refers to
 - (A) railroad pioneers
 - (B) railroads
 - (C) the interstate highway system
 - (D) American society
43. Which of the following can be inferred from the passage?
 - (A) The United States regarded Great Britain as a competitor in developing the most efficient railroad system
 - (B) Steam locomotive power was first used in 1832
 - (C) American businessmen saw railroads as a threat to established businesses
 - (D) Steam locomotives replaced horses because of the distances across the country
44. The author concludes that for the first decade or more, there was not yet a true railroad system because
 - (A) passenger cars were not stable, comfortable or large
 - (B) locomotives were not powerful enough
 - (C) schedules were unreliable and wrecks were frequent
 - (D) lines were relatively short and not usually linked
45. The underlined word "schedules" is closest in meaning to:
 - (A) safety procedures
 - (B) employees
 - (C) timetables
 - (D) railroad tracks
46. Which of the following is NOT true about the 1830's and 1840's
 - (A) passenger cars became larger
 - (B) schedules were reliable
 - (C) locomotives became more powerful
 - (D) tracks were heavier

47. The underlined word “stable” is closest in meaning to
 (A) fixed
 (B) supportive
 (C) reliable
 (D) sound
48. By what time had almost 3,000 miles of track been laid?
 (A) 1830
 (B) 1836
 (C) 1840
 (D) mid-1860s
49. The underlined word “surpassed” is closest in meaning to
 (A) exceeded
 (B) beaten
 (C) overtaken
 (D) equaled
50. Why does the author include details about Great Britain in the passage?
 (A) To compare developments in both the United States and Great Britain
 (B) To illustrate the competitiveness between the two countries
 (C) To show where Americans got their ideas and technology from
 (D) To provide a more complete historical context

Answer key:

Reading Comprehension (2)

In the early 20th century, the concept of relativity revolutionized the way scientists perceived time and space. Albert Einstein's theory, particularly the Special Theory of Relativity, introduced the idea that time is not absolute but can change depending on the speed of an object relative to an observer. This phenomenon, known as time dilation, has been confirmed through numerous experiments, such as observing the decay rates of fast-moving particles. The theory also established that the speed of light in a vacuum is constant, regardless of the motion of the source or the observer. These principles have had profound implications, not only in physics but also in technology, influencing the development of devices like GPS, which must account for relativistic effects to provide accurate positioning. Without adjustments for these effects, errors in GPS calculations could amount to several kilometers per day.

1. What is the main idea of the passage?
 - (A) Time and space are fixed concepts.
 - (B) Relativity changed our understanding of time and space.
 - (C) The GPS system is unreliable.
 - (D) Light speed varies with motion.
2. According to the theory, time can:
 - (A) Always move at the same rate.
 - (B) Change depending on relative speed.
 - (C) Be faster than light.
 - (D) Remain unaffected by motion.
3. The phenomenon described as "time dilation" refers to:
 - (A) Time changing with relative speed.
 - (B) Time becoming absolute.
 - (C) The slowing down of light.
 - (D) The constancy of gravity.
4. Which experiment supports the theory?
 - (A) Measuring temperature in space.
 - (B) Testing sound waves underwater.
 - (C) Observing decay rates of fast-moving particles.
 - (D) Monitoring planetary rotations.
5. What constant did Einstein's theory establish?
 - (A) Gravity in all directions.
 - (B) Speed of light in a vacuum.
 - (C) Rate of planetary motion.
 - (D) Speed of sound in air.

6. GPS systems need to account for relativistic effects because:
- (A) Satellites travel at high speeds.
 - (B) The Earth rotates slowly.
 - (C) Light bends near planets.
 - (D) Gravity is constant.
7. Without adjustments for relativity, GPS errors could be:
- (A) A few meters per day.
 - (B) Several kilometers per day.
 - (C) Nearly zero.
 - (D) Limited to time readings.
8. What does “regardless” in line 6 mean?
- (A) Depending on.
 - (B) Even if.
 - (C) Because of.
 - (D) Similar to.
9. The passage suggests that relativity has influenced:
- (A) Only theoretical physics.
 - (B) Only the measurement of gravity.
 - (C) Only astronomical studies.
 - (D) Both science and technology.
10. Which of the following is NOT mentioned in the passage?
- (A) The speed of light is constant.
 - (B) Time can change with speed.
 - (C) Gravity affects GPS.
 - (D) Experiments support relativity.

Although management principles have been implemented since ancient times, most management scholars trace the beginning of modern management thought back to the early 1900s, beginning with the pioneering work of Frederick Taylor (1856-1915). Taylor was the first person to study work scientifically. He is most famous for introducing techniques of time and motion study, differential piece rate systems, and for systematically specializing the work of operating employees and managers. Along with other pioneers such as Frank and Lillian Gilbreth, Taylor set the stage, labeling his philosophy and methods “scientific management”. At that time, his philosophy, which was concerned with productivity, but which was often misinterpreted as promoting worker interests at the expense of management, was in marked contrast to the prevailing industrial norms of worker exploitation.

The time and motion study concepts were popularized by Frank and Lillian Gilbreth. The Gilbreths had 12 children. By analyzing his children’s dishwashing and bedmaking chores, this pioneer efficiency expert, Frank Gilbreth, hit on principles whereby workers

could eliminate waste motion. He was memorialized by two of his children in their 1949 book called “Cheaper by the Dozen”. The Gilbreth methods included using stop watches to time worker movements and special tools (cameras and special clocks) to monitor and study worker performance, and also involved identification of “therbligs” (Gilbreth spelled backwards) – basic motions used in production jobs. Many of these motions and accompanying times have been used to determine how long it should take a skilled worker to perform a given job. In this way an industrial engineer can get a handle on the approximate time it should take to produce a product or provide a service. However, use of work analysis in this way is unlikely to lead to useful results unless all five work dimensions are considered: physical, psychological, social, cultural, and power.

11. What is the passage primarily about?
 - (A) The limitations of pioneering studies in understanding human behavior
 - (B) How time and motion studies were first developed
 - (C) The first applications of a scientific approach to understanding human behavior
 - (D) The beginnings of modern management theory
12. The underlined word “which” refers to
 - (A) scientific management
 - (B) philosophy
 - (C) productivity
 - (D) time and motion study
13. It can be inferred from the first paragraph that
 - (A) workers welcomed the application of scientific management
 - (B) Taylor’s philosophy is different from the industrial norms
 - (C) by the early 1900s science had reached a stage where it could be applied to the workplace
 - (D) workers were no longer exploited after the introduction of scientific management.
14. The underlined word “prevailing” is closest in meaning to
 - (A) predominant
 - (B) broadly accepted
 - (C) prevalent
 - (D) common
15. According to the passage, Frank Gilbreth discovered how workers could eliminate waste motion by
 - (A) using special tools such as cameras and clocks
 - (B) using stop watches
 - (C) applying scientific management principles
 - (D) watching his children do their chores
16. The basic motions used in production jobs were given which one of following names by Frank Gilbreth?
 - (A) dimensions
 - (B) gilbreths

- (C) therbligs
- (D) monitors

17. According to the passage, the time it takes a skilled worker to perform the motion of a given job can be measured by using:
- (A) stop watches
 - (B) all 5 work dimensions
 - (C) special tools
 - (D) therbligs
18. The underlined word “motions” is closest in meaning to
- (A) stop watches
 - (B) habits
 - (C) actions
 - (D) special tools
19. The underlined word “dimensions” is closest in meaning to
- (A) sizes
 - (B) extents
 - (C) aspects
 - (D) standards
20. All of the following are true except
- (A) scientific management was concerned with productivity.
 - (B) the beginnings of modern management thought commenced in the 19th century.
 - (C) Frank Gilbreth’s fame was enhanced by two of his children writing a book.
 - (D) analyzing work to increase productivity is not likely to be useful unless all of the dimensions are considered.

In the late 19th century, the world underwent a rapid transformation driven largely by industrialization and technological progress. Nations such as Britain, Germany, and the United States emerged as global powers, fueled by advances in steel production, electricity, and transportation. The expansion of railways connected remote regions, facilitating trade and migration, while innovations like the telegraph and telephone revolutionized communication. However, these developments were not without consequences. Urban centers swelled with new migrants seeking work, leading to overcrowded housing and unsanitary conditions. Laborers toiled for long hours in hazardous factories, and social inequalities became increasingly apparent. In response, reform movements began to push for better working conditions, public health systems, and educational reforms. Internationally, industrialization altered the balance of power. Nations competed for colonies and resources, leading to rising tensions that would eventually contribute to global conflicts in the early 20th century. This era, often referred to as the Second Industrial Revolution, set the stage for both unprecedented economic growth and profound social change.

21. The main purpose of the passage is to:
- (A) Describe the causes of the First Industrial Revolution
 - (B) Explain the impact of industrialization in the late 19th century
 - (C) Compare Britain's and Germany's economies
 - (D) Argue against technological progress
22. According to the passage, which countries became global powers in the late 19th century?
- (A) Britain, Germany, and France
 - (B) Germany, United States, and Italy
 - (C) Britain, Germany, and United States
 - (D) France, Italy, and Britain
23. The expansion of railways primarily helped by:
- (A) Reducing the cost of steel production
 - (B) Ending colonial competition
 - (C) Improving factory safety
 - (D) Facilitating trade and migration
24. The telegraph and telephone are mentioned as examples of:
- (A) Communication innovations
 - (B) Political reforms
 - (C) Transportation systems
 - (D) Medical discoveries
25. What problem is highlighted as a result of rapid urbanization?
- (A) Overcrowded housing and poor sanitation
 - (B) Decline in international trade
 - (C) Lack of technological skills
 - (D) Decrease in industrial output
26. Which of the following was a reaction to poor working conditions?
- (A) Increased industrial output
 - (B) Reform movements
 - (C) Reduced migration to cities
 - (D) Rise in colonial competition
27. The phrase "altered the balance of power" most likely refers to:
- (A) Technological dominance between companies
 - (B) The rise of reform movements
 - (C) Economic and political shifts among nations
 - (D) Changes in factory management

28. The Second Industrial Revolution is described as an era of:
- (A) Limited economic growth but major political reform
 - (B) Both economic growth and social change
 - (C) Declining international competition
 - (D) Agricultural expansion
29. Which statement is best supported by the passage?
- (A) All nations benefited equally from industrialization
 - (B) Reform movements eliminated social inequalities
 - (C) The telephone reduced overcrowding in cities
 - (D) Industrialization caused both progress and problems
30. Which event is implied to occur after the period described?
- (A) World War I
 - (B) The American Revolution
 - (C) The Renaissance
 - (D) The French Revolution

Some pioneering work that began as an attempt to discover ways to increase production efficiency led to the founding of the human relations movement in industry and to the development of motivational skills and tools for managers. In 1927 researchers were involved in determining the optimum amount of lighting, temperature, and humidity (with lighting being considered the most important) for the assembly of electronic components at Western Electric. The researchers found that lighting had no consistent effect on production. In fact, production sometimes increased when lighting was reduced to the level of ordinary moonlight! The important part of this experiment began when two Harvard researchers, Elton Mayo and Fritz Roethlisberger, were brought in to investigate these unexpected results further. They found that workers were responding not to the level of lighting but to the fact that they were being observed by the experimenters.

This phenomenon came to be known as the Hawthorne effect since the experiments were conducted at the Western Electric Hawthorne plant. This was the first documented and widely published evidence of the psychological effects on doing work, and it led to the first serious effort aimed at examining psychological and social factors in the workplace. Further experiments were continued for five years. Generally, the researchers concluded from their experiments that economic motivation (pay) was not the sole source of productivity and, in some cases, not even the most important source. Through interviews and test results, the researchers focused on the effects of work attitudes, supervision, and the peer group and other social forces, on productivity.

Their findings laid the groundwork for modern motivation theory, and the study of human factors on the job, which continues to this day in such common practices as selection and training, establishing favorable work conditions, counseling, and personnel operations. The contributions of this experiment shifted the focus of human motivation from economics to a multifaceted approach including psychological and social forces.

31. What is the passage primarily about?
- (A) The first widely published development in modern motivation theory
 - (B) Shifting the focus of human motivation from economics to a multifaceted approach
 - (C) The importance of careful research
 - (D) The results of a pioneering study at Western Electric
32. The underlined word “optimum” is closest in meaning to
- (A) positive
 - (B) favorable
 - (C) best
 - (D) alternate
33. The most significant finding of the original research was
- (A) lighting had no consistent effect on production
 - (B) production sometimes increased when lighting was reduced to the level of ordinary moonlight.
 - (C) that lighting was no more important than the other factors of temperature and humidity.
 - (D) the results were unexpected and confusing.
34. Why does the author say that the important part of this research began when two Harvard researchers were brought in (lines 7-8)
- (A) Until then the research had been poorly conducted
 - (B) They took a multifaceted approach
 - (C) The results of the original research did not make sense
 - (D) Harvard has a good reputation in conducting research
35. The research became known as the “Hawthorne effect” because
- (A) it was the name of the plant where the study was conducted
 - (B) It was the name suggested by the Harvard researchers
 - (C) It was the name of the principal experimenter
 - (D) There were hawthorne plants growing at Western Electric where the study was conducted
36. It can be inferred from this passage that the Hawthorne study
- (A) led to lighting, temperature, and humidity no longer being considered important when seeking ways to improve production
 - (B) Stimulated further research into work condition and worker behavior
 - (C) Led to psychological factors becoming the most important consideration in achieving production efficiency
 - (D) Led to economic considerations being less important in achieving productivity
37. Part of the reason for the change in focus from economics to a more multifaceted approach to the psychological effects on doing work was
- (A) due to the recognition that workers should be happy at work in order to maintain high productivity
 - (B) a general conclusion that pay was sometimes not the most important factor

- (C) because the Hawthorne study continued for so long
- (D) because the workers requested it

38. According to the passage, it can be concluded that a “multifaceted approach” to human motivation in the workplace
- (A) excludes economics
 - (B) can lead to greater productivity
 - (C) excludes physical conditions
 - (D) focuses mainly on psychological and social forces
39. The underlined word “multifaceted” is closest in meaning to
- (A) versatile
 - (B) complex
 - (C) many-sided
 - (D) multitude
40. Which of the following is NOT true about the Hawthorne study?
- (A) It was the first documented evidence of the psychological effects on doing work
 - (B) The Hawthorne study continued for five years
 - (C) They found that workers responded not to the level of lighting but to the fact that other work conditions were not favorable
 - (D) The study changed the focus from economics to a multifaceted approach

The Silk Road was not a single road but a vast network of trade routes that connected China to the Mediterranean, flourishing from around 200 BCE until the 15th century. It facilitated the exchange of goods, ideas, cultures, and even diseases. Silk, porcelain, spices, and precious metals traveled west, while wool, glassware, and horses made their way east. More than just an economic artery, the Silk Road was a cultural superhighway. Along these routes, religions such as Buddhism, Islam, and Christianity spread, blending with local traditions. Cities like Samarkand and Kashgar became cosmopolitan centers where languages, art styles, and cuisines mixed freely.

The decline of the Silk Road was due to several factors. The rise of maritime trade routes offered faster, safer transport for goods. Political instability and the fragmentation of the Mongol Empire disrupted overland trade. Furthermore, outbreaks of plague made long-distance travel riskier. By the 15th century, the once-bustling Silk Road had diminished in importance, but its legacy persisted in the blending of cultures and the technological innovations it helped spread across continents.

41. What was the Silk Road primarily?
- (A) A single paved road from China to Europe
 - (B) A network of interconnected trade routes
 - (C) A maritime shipping route
 - (D) A political alliance between empires

42. Which goods traveled west from China?
- (A) Wool and glassware
 - (B) Horses and spices
 - (C) Silk and porcelain
 - (D) Silver and wool
43. According to the passage, what else besides goods was exchanged?
- (A) Only languages
 - (B) Ideas, cultures, and religions
 - (C) Maritime technology
 - (D) Political alliances
44. The cities of Samarkand and Kashgar were important because:
- (A) They were the start and end of the Silk Road
 - (B) They were centers of cultural exchange
 - (C) They produced all the silk traded
 - (D) They were capitals of empires
45. What was one factor leading to the decline of the Silk Road?
- (A) The invention of the compass
 - (B) The fall of the Roman Empire
 - (C) The emergence of safer sea routes
 - (D) The discovery of America
46. Which religion is NOT mentioned as spreading via the Silk Road?
- (A) Buddhism
 - (B) Islam
 - (C) Hinduism
 - (D) Christianity
47. Why did maritime trade routes become preferred?
- (A) They required fewer taxes
 - (B) They were faster and safer
 - (C) They allowed more cultural mixing
 - (D) They were controlled by the Mongol Empire
48. The word “artery” in paragraph 2 most likely means:
- (A) A type of building
 - (B) A channel or route of transport
 - (C) A legal agreement
 - (D) A source of food

49. The decline of the Silk Road happened mainly in which century?

- (A) 13th
- (B) 14th
- (C) 15th
- (D) 16th

50. What is the main idea of the passage?

- (A) The Silk Road's rise, cultural impact, and decline
- (B) The spread of Buddhism across Asia
- (C) The superiority of sea routes over land routes
- (D) The political history of the Mongol Empire

Answer key:

Reading Comprehension (3)

During the Industrial Revolution of the 18th and 19th centuries, Britain experienced rapid economic growth, largely fueled by advances in manufacturing, transportation, and technology. The steam engine, perfected by James Watt, became a symbol of this era, powering factories, trains, and ships. Industrial cities like Manchester and Birmingham expanded quickly, attracting thousands from rural areas in search of work. While the revolution increased productivity and created new wealth, it also led to overcrowded housing, long working hours, and dangerous labor conditions. Child labor was common, and wages were often barely enough to survive. Over time, social reformers and labor unions pushed for laws improving working conditions, reducing working hours, and banning the exploitation of children. These changes laid the foundation for modern labor rights.

1. What was one major cause of Britain's economic growth during the Industrial Revolution?
 - (A) Decline in agricultural production
 - (B) Advances in manufacturing and technology
 - (C) Decrease in population
 - (D) Expansion of rural farming
2. Who perfected the steam engine?
 - (A) George Stephenson
 - (B) Thomas Edison
 - (C) James Watt
 - (D) Alexander Graham Bell
3. Which cities expanded rapidly during the Industrial Revolution?
 - (A) Manchester and Birmingham
 - (B) London and Paris
 - (C) Liverpool and Glasgow
 - (D) Oxford and Cambridge
4. What did rural migrants mainly seek in industrial cities?
 - (A) Better education
 - (B) Political stability
 - (C) Employment opportunities
 - (D) Religious freedom
5. Which of the following was NOT a problem faced by workers during this period?
 - (A) Overcrowded housing
 - (B) Long working hours
 - (C) High wages
 - (D) Dangerous labor conditions

6. What was common among child workers at the time?
 - (A) Attending school regularly
 - (B) Receiving high salaries
 - (C) Being exploited in dangerous jobs
 - (D) Working only part-time
7. Who pushed for laws to improve working conditions?
 - (A) Business owners
 - (B) Social reformers and labor unions
 - (C) Politicians only
 - (D) Factory managers
8. Which of the following reforms was introduced?
 - (A) Longer working hours
 - (B) Child exploitation legalization
 - (C) Banning child labor
 - (D) Increasing overcrowding
9. What is the main idea of the passage?
 - (A) The role of agriculture in Britain's history
 - (B) The negative effects of industrialization only
 - (C) The Industrial Revolution's impact on Britain's economy and labor rights
 - (D) The invention of the steam engine
10. According to the passage, the Industrial Revolution laid the foundation for:
 - (A) Modern transportation systems
 - (B) Modern labor rights
 - (C) Modern farming techniques
 - (D) Modern educational reforms

Artificial Intelligence (AI) has rapidly advanced in recent years, influencing nearly every sector of society, from healthcare and finance to education and entertainment. While its potential benefits are undeniable, the ethical concerns surrounding AI are equally significant. The primary issues involve bias in algorithms, the loss of jobs due to automation, and the possibility of AI being used for harmful purposes such as surveillance or autonomous weapons. Bias in AI systems often stems from the data they are trained on. If the data reflects existing societal prejudices, the AI can unintentionally perpetuate and even amplify these biases. For example, facial recognition systems have been shown to misidentify individuals from certain ethnic groups at higher rates, leading to unfair treatment. Addressing this issue requires diverse and representative datasets, as well as transparency in how AI decisions are made.

Job displacement is another pressing concern. While AI can increase efficiency and productivity, it can also render certain roles obsolete, leading to economic instability for affected worker. Experts recommend that governments and industries invest in reskilling programs to help people adapt to new job opportunities in an AI-driven economy. Lastly, the misuse of AI for malicious purposes is a growing fear. Autonomous weapons could act without human intervention, raising questions about accountability in warfare. Similarly, mass surveillance powered by AI can infringe on privacy rights, creating a society where individuals feel constantly monitored. Balancing the benefits of AI with these ethical concerns requires careful regulation, global cooperation, and ongoing public dialogue. If approached responsibly, AI can be a powerful tool for solving some of humanity's most pressing problems.

11. What is the main focus of the passage?
 - (A) The technical design of AI systems
 - (B) Ethical issues related to AI
 - (C) Historical development of AI
 - (D) The speed of AI algorithms
12. According to the passage, what is a major cause of bias in AI?
 - (A) Poor programming skills
 - (B) Lack of computing power
 - (C) Biased training data
 - (D) Overuse of automation
13. What is an example given of AI bias in the text?
 - (A) Job loss in manufacturing
 - (B) Facial recognition errors affecting certain ethnic groups
 - (C) Autonomous weapons in warfare
 - (D) AI predicting stock prices incorrectly
14. How can AI bias be addressed?
 - (A) By banning facial recognition
 - (B) Limiting AI to entertainment purposes
 - (C) Using more diverse datasets and ensuring transparency
 - (D) Increasing computer speed
15. What is one economic consequence of AI mentioned in the passage?
 - (A) Inflation rates increase
 - (B) Declining consumer demand
 - (C) Higher export rates
 - (D) Job displacement

16. What do experts suggest to combat job loss due to AI?
- (A) Implement reskilling programs
 - (B) Reduce the use of AI
 - (C) Shorten working hours
 - (D) Raise AI taxes
17. Why are autonomous weapons controversial?
- (A) They are too expensive
 - (B) They require advanced technology
 - (C) They can act without human control
 - (D) They only work in certain countries
18. What is the main privacy concern about AI mentioned in the passage?
- (A) AI controlling personal finances
 - (B) AI writing personal letters
 - (C) Tracking weather patterns
 - (D) Mass surveillance
19. What does the passage suggest is necessary to balance AI benefits and risks?
- (A) Global cooperation and regulation
 - (B) Increasing AI investment without restrictions
 - (C) Banning AI completely
 - (D) Leaving AI unregulated
20. What is the overall tone of the passage?
- (A) Alarmist and fearful
 - (B) Neutral and analytical
 - (C) Optimistic without concerns
 - (D) Sarcastic and critical

The medieval artists didn't know about perspective; they didn't want to make their people look like real, individual people in a real, individual scene. They wanted to show the truth, the eternal quality of their religious stories. So these artists didn't need to know about perspective. In the European Renaissance period, artists wanted to show the importance of the individual person and his or her possessions and surroundings. A flat medieval style couldn't show this level of reality and the artists needed a new technique. It was the Italian artist Brunelleschi who discovered the technique of perspective drawing. At first the artists of the Renaissance only had single-point perspective. Later they realized that they could have two-pointed perspective and still later multi-point perspective. With two-point perspective they could turn an object (like a building) at an angle to the picture and draw two sides of it. The technique of perspective which seems so natural to us now is an invented technique, a part of the "grammar of painting". Like all bits of grammar there are exceptions about perspective. For example, only vertical and horizontal surfaces seem to meet on eye level. Sloping roof tops don't meet on eye level.

For 500 years, artists in Europe made use of perspective drawing in their pictures. Nevertheless, there are a range of priorities that artists in displaying individual styles. Crivelli wanted to show depth in his picture and he used a simple single-point perspective. Cezanne always talked about space and volume. Van Gogh, like some of the other painters of the Impressionist period, was interested in Japanese prints. And Japanese artists until this century were always very strong designers of “flat” pictures. Picasso certainly made pictures which have volume and depth. However, he wanted to keep our eyes on the surface and to remind us that his paintings are paintings and not illusions. It is technically easy to give an illusion of depth. However, a strong two dimensional design is just as important as a feeling of depth, and perhaps more important.

21. The passage mainly discusses
- (A) the difference between medieval and Renaissance art
 - (B) how the technique of perspective influenced the modern art
 - (C) the discovery of the technique of perspective
 - (D) the contribution of Renaissance artists
22. The underlined word “eternal” is closest in meaning to
- (A) timeless
 - (B) infinite
 - (C) frequent
 - (D) constant
23. According to the passage, which is the main concern for medieval artists?
- (A) the individual person and his/her possessions and surroundings
 - (B) real people, real scenes
 - (C) eternal timeless truth of the earth
 - (D) themes of religious stories
24. The discovery of perspective was the result of
- (A) Renaissance artists’ to prove that the medieval artists could show level of reality
 - (B) the need to turn an object at an angle and draw more than one side of it
 - (C) the subject being shifted from religious stories to individual person and surroundings.
 - (D) natural evolution of human senses
25. The underlined word “it” refers to
- (A) the picture
 - (B) perspective
 - (C) angle
 - (D) the object
26. The underlined word “Grammar ” is closest in meaning to
- (A) construction
 - (B) grammatical rules
 - (C) rules and regulations
 - (D) tones and volume

27. The author's purpose to give the underlined example is to
(A) explain how perspective works in painting
(B) support two-pointed perspective
(C) illustrate that there are exceptions about perspective
(D) point out that the technique of perspective though seems so natural is an invented technique
28. The following artists' priorities in style shift away from perspective except
(A) Crivelli
(B) Cezanne
(C) Japanese artists
(D) Brunelleschi
29. The underlined word "Illusion" is closest in meaning to
(A) deception
(B) photograph
(C) decoration
(D) illustration
30. It can be inferred from the passage that Renaissance artists
(A) embraced the medieval style of eternal truth
(B) needed to develop a new approach towards painting to show a new level of reality
(C) were inspired by vertical and horizontal surfaces in inventing the technique of perspective
(D) saw two dimensional design more important than a feeling of depth

Jazz has been called "the art of expression set to music", and "America's great contribution to music". It has functioned as popular art and enjoyed periods of fairly widespread public response, in the "jazz age" of the 1920s, in the "swing era" of the late 1930s and in the peak popularity of modern jazz in the late 1950s. The standard legend about Jazz is that it originated around the end of the 19th century in New Orleans and moved up the Mississippi River to Memphis, St. Louis, and finally to Chicago. It welded together the elements of Ragtime, marching band music, and the Blues. However, the influences of what led to those early sounds goes back to tribal African drum beats and European musical structures. Buddy Bolden, a New Orleans barber and cornet player, is generally considered to have been the first real Jazz musician, around 1891.

What made Jazz significantly different from the other earlier forms of music was the use of improvisation. Jazz displayed a break from traditional music where a composer wrote an entire piece of music on paper, leaving the musicians to break their backs playing exactly what was written on the score. In a Jazz piece, however, the song is simply a starting point, or sort of skeletal guide for the Jazz musicians to improvise around. Actually, many of the early Jazz musicians were bad sight readers and some couldn't even read music at all. Generally speaking, these early musicians couldn't make very much money and were stuck working menial jobs to make a living. The second wave of New Orleans Jazz musicians included such memorable players as Joe Oliver, Kid Ory, and Jelly Roll Morton. These men formed small bands and took the music of earlier musicians, improved its complexity, and gained greater success. This music is known as "hot Jazz" due to the enormously fast speeds and rhythmic drive. A young cornet player by the name of Louis Armstrong was discovered

by Joe Oliver in New Orleans. He soon grew up to become one of the greatest and most successful musicians of all time, and later one of the biggest stars in the world. The impact of Armstrong and other talented early Jazz musicians changed the way we look at music.

31. The Passage answers which of the following questions?
- (A) Why did Ragtime, marching band music, and the Blues lose popularity after about 1900?
 - (B) What were the origins of Jazz and how did it differ from other forms of music?
 - (C) What has been the greatest contribution of cornet players to music in the twentieth century?
 - (D) Which early Jazz musicians most influenced the development of Blues music?
32. According to the passage, Jazz originated in
- (A) Chicago
 - (B) St. Louis
 - (C) along the Mississippi river
 - (D) New Orleans
33. The underlined word “welded” is closest in meaning to
- (A) squeezed
 - (B) bound
 - (C) added
 - (D) stirred
34. Which of the following distinguished Jazz as a new form of musical expression?
- (A) the use of cornets
 - (B) “hot Jazz”
 - (C) improvisation
 - (D) New Orleans
35. The underlined word “skeletal” is closest in meaning to
- (A) framework
 - (B) musical
 - (C) basic
 - (D) essential
36. Which of the following can be inferred from the passage?
- (A) many early Jazz musicians had poor sight
 - (B) there is no slow music in Jazz
 - (C) many early Jazz musicians had little formal musical training
 - (D) the cornet is the most common musical instrument used in Jazz
37. The underlined word “menial” is closest in meaning to
- (A) mens
 - (B) attractive
 - (C) degrading
 - (D) skilled

38. According to the passage, which of the following belonged to the second wave of New Orleans Jazz musicians?
- (A) Louis Armstrong
 - (B) Buddy Bolden
 - (C) St. Louis
 - (D) Joe Oliver
39. All of the following are true EXCEPT
- (A) the late 1930s was called the “swing era”
 - (B) “hot Jazz” is rhythmic
 - (C) Jazz has been said to be America’s greatest contribution to music
 - (D) Joe Oliver is generally considered to be the first real Jazz musician
40. Which of the following terms is defined in the passage?
- (A) “improvisation”
 - (B) “traditional”
 - (C) “composer”
 - (D) “score”

In the vast expanse of the Pacific Ocean lies the Mariana Trench, the deepest part of the world's oceans. Stretching over 2,500 kilometers, it plunges to a maximum known depth of about 11,034 meters at the Challenger Deep. This region remains one of the most mysterious on Earth, with pressures over a thousand times greater than at sea level, making exploration extremely difficult. Despite these harsh conditions, life persists in the form of unique microorganisms, crustaceans, and certain fish species that have adapted to the darkness and high pressure. Scientists use remotely operated vehicles (ROVs) to explore the trench, gathering data on its geology, biodiversity, and possible mineral resources. The trench also plays a vital role in the study of plate tectonics, as it marks the boundary where the Pacific Plate is subducting beneath the Mariana Plate. Ongoing research may help us understand not only Earth’s geological processes but also the potential for life in extreme environments on other planets.

41. Where is the Mariana Trench located?
- (A) Atlantic Ocean
 - (B) Pacific Ocean
 - (C) Indian Ocean
 - (D) Arctic Ocean
42. What is the maximum known depth of the Mariana Trench?
- (A) 10,500 meters
 - (B) 11,034 meters
 - (C) 9,800 meters
 - (D) 12,200 meters

43. Why is exploration of the trench difficult?
- (A) It is too cold
 - (B) There is no oxygen
 - (C) High pressure
 - (D) Lack of technology
44. Which type of life forms are found in the trench?
- (A) Whales
 - (B) Microorganisms and specialized fish
 - (C) Coral reefs
 - (D) Penguins
45. What tool do scientists use to explore the trench?
- (A) Submarines with human crews
 - (B) Diving suits
 - (C) Satellites
 - (D) Remotely operated vehicles
46. The Mariana Trench is important for the study of:
- (A) Weather patterns
 - (B) Plate tectonics
 - (C) Volcanic eruptions only
 - (D) Ocean currents
47. What is happening to the Pacific Plate at the trench?
- (A) It is breaking apart
 - (B) It is subducting under another plate
 - (C) It is rising to the surface
 - (D) It is stationary
48. What might studying the trench help scientists understand about other planets?
- (A) Climate change
 - (B) Extreme life conditions
 - (C) Farming techniques
 - (D) Space travel speed
49. The word “plunges” in the passage means:
- (A) Rises sharply
 - (B) Moves sideways
 - (C) Sinks deeply
 - (D) Breaks suddenly

50. Which of the following best describes the trench's environment?

- (A) Bright and warm
- (B) Full of coral
- (C) Shallow and calm
- (D) Dark and high-pressure

Reading Comprehension (4)

In the early 20th century, polar exploration was one of the most dangerous and respected pursuits in the world. Figures like Roald Amundsen and Robert Falcon Scott embarked on perilous journeys to reach the South Pole, enduring extreme cold, unpredictable weather, and scarce supplies. Amundsen, a Norwegian explorer, reached the pole first in December 1911, using dogsled teams and meticulous planning. Scott, arriving a month later, faced tragic consequences when he and his team perished on the return journey. These expeditions were not merely about personal glory; they contributed valuable scientific knowledge about polar climates, geography, and survival techniques. Despite the technological limitations of the time, their determination and courage left an enduring mark on the history of exploration.

1. What was the primary goal of the explorers mentioned in the passage?
 - (A) To map the North Pole
 - (B) To reach the South Pole
 - (C) To hunt polar animals
 - (D) To establish permanent settlements
2. When did Amundsen reach the South Pole?
 - (A) December 1911
 - (B) January 1911
 - (C) February 1912
 - (D) November 1911
3. How did Amundsen's team primarily travel?
 - (A) On foot
 - (B) By snowmobile
 - (C) Using dogsled teams
 - (D) By skiing alone
4. What happened to Scott's expedition?
 - (A) They returned safely
 - (B) They were rescued by Amundsen
 - (C) They perished on the return journey
 - (D) They stayed to build a base camp
5. Which of the following best describes the challenges faced by these explorers?
 - (A) Heat and lack of water
 - (B) Extreme cold and scarce supplies
 - (C) Crowds and political issues
 - (D) Hostile local populations

6. Why were these expeditions considered important beyond personal achievement?
 - (A) They proved that polar regions were easy to explore
 - (B) They provided scientific knowledge
 - (C) They discovered new species of animals
 - (D) They built trade routes
7. What nationality was Amundsen?
 - (A) British
 - (B) Norwegian
 - (C) American
 - (D) Canadian
8. What factor likely helped Amundsen succeed over Scott?
 - (A) Use of motorized vehicles
 - (B) Better luck with weather
 - (C) Use of dogsled teams and careful planning
 - (D) Larger expedition team
9. Which year did Scott arrive at the South Pole?
 - (A) 1910
 - (B) 1911
 - (C) 1912
 - (D) 1913
10. What legacy did these explorers leave?
 - (A) Inspiration and scientific contributions
 - (B) Maps of the Amazon rainforest
 - (C) Discovery of the North Pole
 - (D) Construction of polar airports

Philosophy in the second half of the 19th century was based more on biology and history than on mathematics and physics. Revolutionary thought drifted away from metaphysics and epistemology and shifted more towards ideologies in science, politics, and sociology. Pragmatism became the most vigorous school of thought in American philosophy during this time, and it continued the empiricist tradition of grounding knowledge on experience and stressing the inductive procedures of experimental science. The three most important pragmatists of this period were the American philosophers Charles Peirce (1839-1914), considered to be the first of the American pragmatists, William James (1842-1910), the first great American psychologist, and John Dewey (1859-1952), who further developed the pragmatic principles of Peirce and James into a comprehensive system of thought that he called “experimental naturalism”, or “instrumentalism”.

Pragmatism was generally critical of traditional western philosophy, especially the notion that there are absolute truths and absolute values. In contrast, Josiah Royce (1855-1916),

was a leading American exponent of idealism at this time, who believed in an absolute truth and held that human thought and the external world were unified. Pragmatism called for ideas and theories to be tested in practice, assessing whether they produced desirable or undesirable results. Although pragmatism was popular for a time in Europe, most agree that it epitomized the American faith in know-how and practicality, and the equally American distrust of abstract theories and ideologies. Pragmatism is best understood in its historical and cultural context. It arose during a period of rapid scientific advancement, industrialization, and material progress; a time when the theory of evolution suggested to many thinkers that humanity and society are in a perpetual state of progress. This period also saw a decline in traditional religious beliefs and values. As a result, it became necessary to rethink fundamental ideas about values, religion, science, community, and individuality. Pragmatists regarded all theories and institutions as tentative hypotheses and solutions. According to their critics, the pragmatist's refusal to affirm any absolutes carried negative implications for society, challenging the foundations of society's institutions.

11. What is this passage primarily about?
 - (A) the evolution of philosophy in the second half of the 19th century
 - (B) the three most important American pragmatists of the late 19th century
 - (C) the differences between pragmatism and traditional western philosophy
 - (D) American pragmatism
12. Which of the following is true?
 - (A) idealism was an important part of the pragmatic approach
 - (B) "pragmatism" was also known as "traditional western philosophy"
 - (C) pragmatism continued the empiricist tradition
 - (D) pragmatism is best understood independently of its historical and cultural context
13. Which of the following is true, according to the passage?
 - (A) absolute truths and values are notions in western traditional philosophy
 - (B) John Dewey was the first great American psychologist
 - (C) the empiricist tradition is part of traditional western philosophy
 - (D) revolutionary thought was not pragmatic
14. The underlined phrase "at this time" refers to
 - (A) at the time traditional western philosophy was dominant in America
 - (B) at the time pragmatism was popular in Europe
 - (C) 1855-1916
 - (D) the second half of the 19th century
15. According to the passage, pragmatism was more popular in America than Europe because
 - (A) Americans had greater acceptance of the theory of evolution
 - (B) it epitomized the American faith in know-how and practicality
 - (C) Europe had a more traditional society based on a much longer history
 - (D) industrialization and material progress was occurring at a faster pace in America at that time

16. The underlined word “ abstract” is closest in meaning to
(A) unclear
(B) not concrete
(C) new
(D) old
17. The underlined word “perpetual” is closest in meaning to
(A) challenging
(B) continuous
(C) declining
(D) secular
18. The underlined word “fundamental” is closest in meaning to
(A) new
(B) personal
(C) essential
(D) threatening
19. All of the following are true EXCEPT
(A) revolutionary thought shifted more towards ideologies in science, politics and sociology
(B) pragmatists regarded all theories and institutions as tentative hypotheses and solutions
(C) Josiah Royce was not a pragmatist
(D) pragmatism was based on the theory of evolution
20. Which of the following can be inferred from the passage?
(A) Josiah Royce considered Charles Peirce to be challenging the foundations of society’s institutions
(B) Charles Peirce considered Josiah Royce to be too influenced by the theory of evolution
(C) John Dewey would not have developed his system of thought called “experimental naturalism” or “instrumentalism” without the pioneering work of Charles Peirce and William James
(D) Josiah Royce was a revolutionary thinker

For centuries, philosophers and scientists have debated the concept of free will—whether humans truly make their own choices or if every decision is determined by prior causes. Modern neuroscience has added new dimensions to the debate. Experiments using brain scans have shown that neural activity indicating a choice can appear in the brain several seconds before a person becomes consciously aware of making that choice. This discovery suggests that the brain might decide before “we” do, raising questions about personal responsibility, morality, and even the justice system. Critics argue that these experiments oversimplify decision-making, and that conscious thought still plays a crucial role in complex choices. Nevertheless, the intersection of neuroscience, philosophy, and law continues to challenge our understanding of what it means to choose freely.

21. What is the main focus of the passage?
- (A) The history of brain imaging technology
 - (B) The philosophical and scientific debate over free will
 - (C) The role of genetics in human behavior
 - (D) The legal system’s evolution over time
22. According to modern neuroscience experiments, when does brain activity related to choice occur?
- (A) After conscious decision-making
 - (B) Simultaneously with conscious awareness
 - (C) Several seconds before conscious awareness
 - (D) Only during complex moral decisions
23. What does the brain scan discovery imply?
- (A) People do not have emotions
 - (B) The brain might decide before conscious thought
 - (C) Conscious thought controls all actions
 - (D) Brain scans are unreliable
24. How might this research affect the justice system?
- (A) It could question the concept of personal responsibility
 - (B) It would make punishments harsher
 - (C) It would eliminate the need for lawyers
 - (D) It would only affect medical cases
25. What is the criticism of these neuroscience experiments?
- (A) They do not involve enough participants
 - (B) They ignore genetics
 - (C) They oversimplify decision-making
 - (D) They take too long to perform

26. What fields are mentioned as intersecting in this debate?
- (A) Physics, chemistry, and biology
 - (B) Neuroscience, philosophy, and law
 - (C) Medicine, politics, and history
 - (D) Sociology, anthropology, and literature
27. Which word in the passage is closest in meaning to “complicated”?
- (A) Intersection
 - (B) Responsibility
 - (C) Complex
 - (D) Justice
28. What does the passage suggest about conscious thought?
- (A) It is irrelevant in decision-making
 - (B) It still plays a role in complex choices
 - (C) It only works during sleep
 - (D) It always occurs before brain activity
29. What does the debate over free will ultimately question?
- (A) The efficiency of the brain
 - (B) The accuracy of modern science
 - (C) The nature of human choice
 - (D) The use of brain scans
30. Which statement best summarizes the author’s view?
- (A) Free will is an illusion
 - (B) Neuroscience has fully resolved the free will debate
 - (C) Both science and philosophy contribute to the discussion
 - (D) The legal system will not be affected

Alexis de Tocqueville, the French political scientist, historian, philosopher and politician, is most famous for a four-volume book he wrote called “Democracy in America”. He came to America in 1831 to study the American form of democracy and what it might mean to the rest of the world. After a visit of only nine months, he wrote a remarkable book which is regarded as a classic. De Tocqueville had unusual powers of observation. He described not only the democratic system of government and how it operated, but also its effect on how Americans think, feel, and act. Many scholars believe he had a deeper understanding of traditional American beliefs and values than anyone else who has written about the United States. What is so remarkable is that many of these traits which he observed nearly 200 years ago, are still visible and meaningful today. His observations are also important because the timing of his visit, the 1830s, was before America was industrialized. This was the era of the small farmer, the small businessman, and the settling of the western frontier. It was the period of history when the traditional values of the new country were newly established. In just a generation, some 40 years since the adoption of the U.S. Constitution, the new form of

government had already produced a society of people with unique values. He was, however, a neutral observer and saw both the good and bad sides of these qualities.

The first part of “Democracy in America” was written in 1831-32 and published in 1835. A highly positive and optimistic account of American government and society, the book was very well received. He attempted to get a glimpse of the essence of American society, all the while promoting his own philosophy: the equaling of the classes and the inevitable depth of aristocratic privilege. The rest of the book he labored on for four years, and in 1840 the second part was published. This was substantially more pessimistic than the first, warning of the dangers despotism and governmental centralization, and applying his ideas and criticisms more directly to France. As a result, it was not received as well as the first part, except in England where it was acclaimed highly.

31. What is the passage primarily about?
 - (A) Alexis de Tocqueville
 - (B) “Democracy in America”
 - (C) the progress achieved in America within about 40 years after adoption of the U.S. Constitution
 - (D) the impact of the book “Democracy in America”
32. All of the following fields of professional interest and activity are used to describe de Tocqueville EXCEPT
 - (A) philosopher
 - (B) author
 - (C) political scientist
 - (D) politician
33. According to the passage, when did de Tocqueville visit America
 - (A) 1830s
 - (B) 1831
 - (C) 1831-32
 - (D) 1835
34. The underlined phrase “these traits” refers to
 - (A) observations
 - (B) how Americans think, feel, and act
 - (C) traditional American beliefs and values
 - (D) visible and meaningful observations
35. What in the passage is mentioned as being truly remarkable?
 - (A) many of his observations are still visible and meaningful today
 - (B) the book was so detailed and thorough after only such a comparatively short visit
 - (C) that the second volume should be so pessimistic in comparison with the first
 - (D) de Tocqueville’s powers of observation

36. The underlined word “unique” is closest in meaning to
(A) clearly identifiable
(B) outstanding
(C) unmatched
(D) positive
37. The underlined word “neutral” is closest in meaning to
(A) impartial
(B) careful
(C) important
(D) thorough
38. Which of the following can be inferred from the passage?
(A) the English don’t like the French
(B) the book was most important because it was the first time that American values had been clearly documented
(C) de Tocqueville was a slow writer
(D) de Tocqueville was primarily motivated by an interest in his own country
39. The underlined word “glimpse” is closest in meaning to
(A) overview
(B) glance
(C) brief understanding
(D) quick conclusion
40. According to the passage, “Democracy in America” consisted of how many volumes?
(A) one
(B) two
(C) three
(D) four

The notion of “time” has fascinated philosophers, scientists, and artists for centuries. While physicists treat time as a measurable dimension in the fabric of the universe, similar to space, philosophers often question its true nature—whether it is a human construct or an intrinsic property of reality. Some argue that time flows uniformly, like a river carrying all events from the future into the past, while others see it as a series of discrete moments, each existing independently. Modern physics, especially through Einstein’s theory of relativity, revealed that time is not absolute. It can stretch or contract depending on an observer’s speed or gravitational field. This discovery shattered the long-held belief that time was universal for everyone. In the realm of quantum mechanics, the concept becomes even stranger: some interpretations suggest that past, present, and future might coexist, challenging our everyday understanding of cause and effect. Human perception of time is equally complex. Our sense of its passage is subjective, influenced by emotions, focus, and memory. Moments of fear can

feel elongated, while joyful times seem to pass in an instant. Despite centuries of inquiry, time remains one of the most mysterious elements of existence—something we live through constantly, yet barely comprehend.

41. What is the main idea of the passage?
 - (A) Time is purely a philosophical concept
 - (B) Time has been studied from multiple perspectives but remains mysterious
 - (C) Time flows uniformly for everyone
 - (D) Einstein proved that time is an illusion
42. According to the passage, how do philosophers often view time?
 - (A) As a physical force like gravity
 - (B) As a measurable dimension
 - (C) As either a construct or an inherent property
 - (D) As irrelevant to reality
43. What did Einstein's theory of relativity reveal about time?
 - (A) Time is fixed and universal
 - (B) Time can change depending on speed and gravity
 - (C) Time is infinite and unchanging
 - (D) Time flows faster in the past
44. What everyday concept does quantum mechanics challenge according to the passage?
 - (A) Time zones
 - (B) Cause and effect
 - (C) Gravity
 - (D) Human memory
45. Which of the following affects human perception of time?
 - (A) Speed of light
 - (B) Position on Earth
 - (C) Emotions and focus
 - (D) Temperature
46. The phrase "like a river carrying all events" suggests time is:
 - (A) Cyclical
 - (B) Constantly moving forward
 - (C) Repeating itself
 - (D) Standing still

47. What is suggested about moments of fear?
- (A) They pass quickly
 - (B) They feel longer than they actually are
 - (C) They have no effect on time perception
 - (D) They stop time
48. The passage implies that time is:
- (A) Fully understood by science
 - (B) One of the most puzzling aspects of existence
 - (C) Only relevant in physics
 - (D) A myth created by humans
49. The author's tone toward the subject of time is:
- (A) Sarcastic
 - (B) Objective yet intrigued
 - (C) Dismissive
 - (D) Amused
50. Which statement best summarizes the relationship between science and philosophy regarding time?
- (A) Both fully agree on what time is
 - (B) Science ignores philosophy's questions
 - (C) They explore it differently but share the mystery
 - (D) Philosophy rejects all scientific theories
